

Don't Flush Your Medicines Down the Toilet!

- A recent study shows that 80 percent of US streams contain small amounts of human medicines.
- Sewage systems cannot remove these medicines from water that is released into lakes, rivers or oceans.
- Fish and other aquatic animals have shown adverse effects from medicines in the water.
- And, even very small amounts of medicine have been found in drinking water.

How to dispose medications at home

Follow these steps to protect your privacy and reduce unintended drug use, while saving the environment.

1

- Keep medicine in its original child-resistant container.
- Scratch or mark out the patient information on the label.

2

- Place some water into solid medications, such as pills or capsules.
- Then add something nontoxic and unpalatable such as sawdust, kitty litter, charcoal, Comet® or powdered spices (like, cayenne pepper).

3

- Close and seal the container lids tightly with packing or duct tape.
- If discarding blister packs of unused medicines, wrap in multiple layers of duct tape.

4

- Place medicine containers in durable packaging that does not show what's inside (like, a cardboard box).

- Remember to keep medicines away from children and pets.

- Place in the trash close to garbage pickup time.

5

Other ways to properly dispose of unused medicine

- Pharmacy Take-Back Program: Ask your pharmacist if the pharmacy will accept old medicines back from patients.
- Household Hazardous Waste Collection: Find the phone number of your local HHW collection site in the government section of your local white pages of the telephone directory.

Help reduce drug waste

- If you're not sure if you can tolerate a new medicine, ask your doctor about a 10 day trial supply.
- Remember to always take all of your medications as directed.
